

GET AI RIGHT. GET IT SAFE.

Two practical courses for
organisations adopting AI with
confidence delivered by DLPA

COURSE 1: AI CAPABILITY

PROMPTING WITH PURPOSE

Practical AI skills your people will actually use

Most teams have access to AI. Far fewer know how to get reliable, useful work out of it. This hands-on course closes that gap. Participants leave able to brief AI clearly, check its work, and fold it into real tasks without the hype or the hand-wringing.

PARTICIPANTS LEAVE ABLE TO

- Write prompts that get usable results the first time
- Spot and correct AI mistakes before they cost you
- Apply AI to real tasks from your own workload
- Build a repeatable approach the whole team can share

COURSE 2: AI GOVERNANCE

GUARDRAILS, NOT GUESSWORK

Build a safe, defensible approach to AI at work

AI is already in your organisation, whether you've sanctioned it or not. The risk isn't the technology. It's the absence of a clear, practical framework for using it well. This course helps leaders set guardrails that protect the business without strangling the upside.

PARTICIPANTS LEAVE ABLE TO

- Understand where AI creates real risk, and where it doesn't
- Set clear, usable policy people will actually follow
- Define accountability and decision rights for AI use
- Move from ad-hoc experimentation to a defensible position
